Scenarios

A disease is spreading and the government of your smart city has taken money from corporations to let the disease spread far enough to warrant mass vaccinations and other purchases and precautions that will profit those companies. How might you trick their sensors to halt the spread of the diseases?

Scenarios

You have put together an open-source, DIY version of the smart home, but a neighbor's brand-name devices are trying to take control of your open-source solutions using puzzles and traps unique to their product type (e.g. the dishwasher wants to reverse its flow to dirty your dishes). What devices do you have to defeat - and how will you defeat them - to free your home?
